Vehicle Tracking System

Vehicle Tracking System

IDee Tracker is a Web-based User-Friendly GPS Vehicle Tracking and Fleet Management Solution. Using wireless technology it provides real-time vehicle / asset location information and has comprehensive telemetric options. The modular, flexible and scalable architecture can be adapted to any fleet size depending on customer needs. As standard, iDeeTracker includes an in-built map engine with rich GIS features and comprehensive set of business report. With optional RFID integration, the system can be extended to support applications including container monitoring trailer identification and petro-chemical carriers.

Essential Accessories

Control Room Infrastructure

- ▶ Hardware and software
- ▶ Communication and infrastructure

Vehicle Tracking System

- ▶ Secure web based application system
- ▶ Mysql database system
- ▶ Backend integration with legacy system

Vehicle Mounting Hardware And Accessories

- ▶ GPS block box telemetric system with communication interface
- ▶ RFID readers and RFID tags and trailer tracking

Benefits of the System

- ▶ Minimize the paper work & manual intervention
- ▶ Secured management of the vehicles remotely
- ▶ Helps to understand the utilization of vehicles & their productivity
- ▶ A tool that helps to cross check while making payments to drivers based on the trips claimed, hours on duty etc.
- ▶ Brings substantial reduction in maintenance costs
- ▶ Geo-fence as a delivery proof
- ▶ Sms based query helps to know vehicle location using a mobile phone and sms alerts
- ▶ Trip analysis and eta calculation
- ▶ Back end integration with customer network
- ▶ Ad-hoc report generator providing unlimited reports functionality
- ▶ Improved customer service

Security Features

- ▶ Secured, encrypted communication between the vehicle mounting device and communication server.
- ▶ Optional dedicated leased line between the telco service provider and the Infrastructure for the data protection.
- ▶ Secured infrastructure when configured using intranet network.

Project Screen Shots

Vtrak - User Interface Design (GUI)

Real-time Tracking would enable the user to track Vehicle Current Location. The Vehicle position would be displayed on a detailed digital map. This would be central monitoring for Vehicles. The system would support multi window map viewing with individual zoom, pan and other map viewing facilities.

Vtrak - Reports Module

The web based system will be having various report and analysis module to analyze the data.

Trust Track Apps

Live Device Tracking

There are Two modes for view

Map View

It will show various view for digital maps like Customized (Own map data), Google, Yahoo, Open-street and satellite view. It will represent geographical view of your asset current location.

Data View

It will show various data for asset positions like Location Name (reverse Geocode), Asset status (ON or OFF or IDLE), Sensor status (Ignition, Fuel level, A/C, etc.), Alerts (Over Speed, Overtime, Panic, et.,)

Loading Asset on map

On Data View vehicle list will appear with Asset Unique-No (Registration-No or Fleet-No) as well relevant data. Each Asset-No will have Separate Check box to load vehicles on map. When user select the check box will appear on map with maximum zoom level. User can deselect for removing asset from map. Mouse over function will show the Asset necessary details when asset on map.

Map has various functions with simple clicks. They are

- ▶ Geo-fence
- ▶ POI(Point of interest)
- ▶ Full Screen View
- ▶ Default map(Own customized map)
- ▶ Google Map
- ▶ Satellite view

On map view left side there is symbol plus (+) for activates the tools. When user click the Plus tools will extent for access the various functions.

Geo-fence

Geo Fencing allows defining or zoning designations where users can define areas of high interest on a map that cause the system to generate events when monitored assets move in and out of the zone. These zones could be Customer Areas or any unauthorized areas or Depots etc.

How to create Geo-Fences?

Step-by-step Instructions on using Geo-Fencing Module.

Geo-fence button has two buttons View and Hide button will help to activate and deactivate Geo-fences on map. Create new (+) button will help to create new Geo-fence on map.

Multiple Device Tracking

Here, users are able to track multiple assets at one time. In Data view screen user can able to select multi Checkbox for track multi Assets on single screen.

This action would start the device tracking process and you can see assets icons on the map indicating its exact location as shown below:

The screenshot displays the IDEE TRACKER 1.0 web application. The interface includes a top navigation bar with 'Logout' and 'Admin' buttons, and a search icon. The main content area is divided into two sections. On the left, a map shows the location of vehicles, with a yellow callout box for vehicle VOT3001-05 providing details: 'Vehicle No : VOT3001-05', 'D/Time : 18-1-2010 06:26:09 PM', 'Speed : 53 Km/h', and 'Running Since 18-1-2010 06:21:05 PM'. On the right, a table lists tracked assets with checkboxes for selection.

Tracking [7]	History Tracking	Reports
☐ ALL		
☐ AMC3001-05	18-1-2010 06:24:25 PM	0 K/h
Pos Malaysia (mel & Quener),Jalan Klia S3,Malaysia		
☒ AMM3012-08	18-1-2010 06:23:17 PM	0 K/h
Pos Malaysia (mel & Quener),Jalan Klia S3,Malaysia		
☒ VOT3001-05	18-1-2010 06:26:09 PM	53 K/h
Bangunan Pentadbiran Kastam,Jalan Klia S5,Malaysia		

Multiple Device Tracking

History Track function will help user to monitor past day actions for Assets. It will do play back with animated asset moving of assets.

Step by step instruction for History Tracking

On Data view Screen there are 3 Tabs called

- ▶ Live
- ▶ History
- ▶ Reports

By Default Live will be activated when user login. User must click History tab when he need to do play back. Once History Track Mode activate Data will page will changed to History play back with Asset-No list box with Time duration section components. User has to choose any one asset with duration for History playback and click submit. Refer screens.

The screenshot displays the IDEE TRACKER 1.0 web application. The top navigation bar includes 'Logout' and 'Admin' buttons. The main content area is divided into two sections. The left section shows a map of Malaysia with a vehicle track. The right section contains a 'Choose Vehicle' dropdown menu with options: AMC3001-05, AMM3012-08, and VOT3001-05. Below this is a 'Duration' section with date and time pickers. The bottom right section displays a table of vehicle details for AMM3012-08.

AMM3012-08 Details	
OverSpeed Occured	286 Times
Total Trips	N/A
Defence Crossed	N/A
Total Running Time	06:27 (HH:MM)
Total Idle Time	00:54 (HH:MM)
Total Stop Time	06:38 (HH:MM)
Total Distance	394 KM

Reports

These reports are dynamic reports that can be made accessible to users by the Administrator.

- ▶ Activity Report
- ▶ Location Report
- ▶ Graphical Report for Speed and Utilization
- ▶ Speed exception
- ▶ Geo-fence Report

On Data view 3rd tab called Reports. When users activate Report tab, data view will change to Report view with Report name list, Asset List box and duration selection components. Refer screens below.
